Education

University of Bristol MSc Data Science Postgraduate student	2026 - Present
University of Piura BSc Industrial and Systems Engineering Board Member – IEEE UDEP Lima (2019-I, 2019-II)	2015 - 2020

Employment and Work Experience

Aptim Data Scientist and AI Consultant	2026 - Present
Designing Azure-based Generative AI solutions for maintenance work-order planning, leveraging SAP R/3 and SAP HANA data to drive AI-powered prioritization and decision-making across two industrial plants.	
Aptim Data Analyst	2024 - 2026
- Analyzed high-frequency, noisy sensor data from 1,000+ industrial sensors to support operational decision-making and ensure audit-ready datasets for U.S. government compliance and auditing - Developed and standardized 8 KPI models for preventive and corrective maintenance, enabling compliance analysis and data-driven maintenance optimization in gas plant operations - Designed and deployed 20+ Power BI dashboards transforming multi-area datasets into actionable insights for daily operations and managerial decision-making across Operations, HR, Procurement, Occupational Health, and Logistics - Collaborated with international Business Analytics teams (U.S. and Canada) to support analytics workflows, reporting automation, and project tracking solutions	
Enel Distribution Peru Process Analyst	2021 - 2024
- Developed a machine learning model to predict equipment failures with 89% accuracy, optimizing preventive maintenance and generating annual savings of S/2M. - Managed ETL processes for energy loss analysis across 1.5M clients and deployed a historical losses dashboard covering 10,000+ monitoring points. - Led process redesigns for service reconnections, increasing success rates from 95% to 99% through cross-departmental coordination. - Participated in the recovery of energy consumption profiles for 5,000+ clients, centralizing, cleaning, and imputing data for energy regulatory entities.	

Technical Skills

- Programming: Python, SQL
- AI & Machine Learning: Generative AI, LLMs, predictive modelling, classification, regression
- Cloud: Microsoft Azure, Google Cloud Platform
- Data Analytics: Power BI, Tableau, Looker
- Data Engineering: ETL, data cleaning, automation

Personal Projects

Pathora – AI Travel Recommendation System	2026
Developed an AI-powered travel recommendation system generating personalized itineraries based on user preferences and Google Maps data. <i>Python, FastAPI, OpenAI API, Google Maps/Places API, Firebase</i>	
MoodMuse – AI Cultural Recommendation System	2025
Developed an AI and deep learning system for emotion classification and personalized cultural recommendations using MET museum data. <i>Python, Transformers (BLIP-2), Flask, MongoDB, Google Cloud (Vertex AI, Cloud Functions)</i>	

Additional Experience and Qualifications

- AZ-900 Azure Fundamentals (Microsoft)
- PL-300 Power BI Data Analyst Associate (Microsoft)
- Github Actions Certification

Languages

English - fluent, **Spanish** - native
